GT Insight Check

1 sampled comparison

Pending

Check whether the ground-truth evidence list cleanly captures the rewritten context.

Use a thumbs up when:

- the important details from the rewritten context are all present,
- the event split is clear enough to follow,
- the event list preserves the timing and overall meaning,
- and the reasoning chain and reasoning context remain consistent with the extracted insights.

Does the ground-truth evidence list clearly and correctly cover the real context?

Real Context

Background: This is the electricity consumption recorded in Kilowatt (kW) in The Municipal District of Oakhaven.

Scenario: Suppose that there is a heat wave in The Municipal District of Oakhaven from 2013-05-28 12:00:00 for 2 hours in The Municipal District of Oakhaven, leading to excessive use of air conditioning, and 4 times the usual electricity being consumed.

Extracted GT Insights

- E1: This is the electricity consumption recorded in Kilowatt (kW) in The Municipal District of Oakhaven.
Time: null -> null
- E2: Suppose that there is a heat wave in The Municipal District of Oakhaven from 2013-05-28 12:00:00 for 2 hours in The Municipal District of Oakhaven,
Time: 2013-05-28 12:00:00 -> 2013-05-28 14:00:00
- E3: leading to excessive use of air conditioning, and 4 times the usual electricity being consumed.
Time: 2013-05-28 12:00:00 -> 2013-05-28 14:00:00

Reasoning Chain

- E2 -> E3 (cause)

Reasoning Context

- Suppose that there is a heat wave in The Municipal District of Oakhaven from 2013-05-28 12:00:00 for 2 hours in The Municipal District of Oakhaven, leading to excessive use of air conditioning, and 4 times the usual electricity being consumed.
